

Energy Performance Certificate

5 Printers Place
Orange Lane
Over Wallop
STOCKBRIDGE
SO20 8JB

Dwelling type: Mid-terrace house
Date of assessment: 04 February 2009
Date of certificate: 4 February 2009
Reference number: 0950-2875-6380-0498-8191
Total floor area: 97 m²

This home's performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO₂) emissions.

Energy Efficiency Rating

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

Environmental Impact (CO₂) Rating

The environmental impact rating is a measure of a home's impact on the environment in terms of Carbon dioxide (CO₂) emissions. The higher the Rating the less impact it has on the environment.

Estimated energy used, carbon dioxide (CO₂) emissions and fuel costs of this home

	Current	Potential
Energy use	134 kWh/m ² per year	126 kWh/m ² per year
Carbon dioxide emissions	2.0 tonnes per year	1.8 tonnes per year
Lighting	£88 per year	£50 per year
Heating	£194 per year	£203 per year
Hot water	£180 per year	£180 per year

Based on standardised assumptions about occupancy, heating patterns and geographical location, the above table provides an indication of how much it will cost to provide lighting, heating and hot water to this home. The fuel costs only take into account the cost of fuel and not any associated service, maintenance or safety inspection. This certificate has been provided for comparative purposes only and enables one home to be compared with another. Always check the date the certificate was issued, because fuel prices can increase over time and energy saving recommendations will evolve.

To see how this home can achieve its potential rating please see the recommended measures.

Remember to look for the energy saving recommended logo when buying energy-efficient products. It's a quick and easy way to identify the most energy-efficient products on the market. For advice on how to take action and to find out about offers available to help make your home more energy efficient, call **0800 512 012** or visit www.energysavingtrust.org.uk/myhome

About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by EPC Solutions, to a scheme authorised by the Government. This certificate was produced using the SAP 2005 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) (England and Wales) Regulations 2007 as amended. A copy of the certificate has been lodged on a national register.

Assessor's accreditation number: ECMK210007
Assessor's name: Mr Mark Attlesey
Company name/trading name: Mark Attlesey
Address: 1 The landway, Borough Green, TN15 8RG

Phone number: 01732 885 760
Fax number: 01732 885 760
E-mail address: markattlesey@btinternet.com
Related party disclosure: Only me!

If you have a complaint or wish to confirm that this certificate is genuine

Details of the assessor and the relevant accreditation scheme are as above. You can get contact details of the accreditation scheme from their website at not supplied together with details of their procedures for confirmation authenticity of a certificate and for making complaint.

About the building's performance ratings

The ratings on the certificate proved a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 46).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at www.communities.gov.uk/epbd

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings on the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

Visit the government's website at www.communities.gov.uk/epbd to:

- Find how to confirm the authenticity of an energy performance certificate
- Find how to make a complaint about a certificate or the assessor who produced it
- Learn more about the national register where this certificate has been lodged
- Learn more about energy efficiency and reducing energy consumption

Recommended measurers to improve this home's energy performance

5 Printers Place
Orange Lane

STOCKBRIDGE

Date of certificate: 4 February 2009
Reference number: 0950-2875-6380-0498-8191

Summary of this home's energy performance related features

The following is an assessment of the key individual elements that have an impact on this home's performance rating. Each element is assessed against the following scale: Compliant / Average / Good / Very good.

Element	Description	Current performance	
		Energy Efficiency	Environmental
Walls	Average thermal transmittance 0.25 W/m ² K	Very Good	Very Good
Roof	Average thermal transmittance 0.15 W/m ² K	Very Good	Very Good
Floor	Average thermal transmittance 0.18 W/m ² K	Very Good	Very Good
Windows	Fully double glazed	Good	Good
Main heating	Air source heat pump, radiators, electric	Good	Very Good
Main heating controls	Time and temperature zone control	Good	Good
Secondary heating	None	-	-
Hot water	From main system	Average	Good
Lighting	Low energy lighting in 25% of fixed outlets	Average	Average
Air tightness	Air permeability 6.9 m ³ /h.m ² (as tested)	Good	Good

Current energy efficiency rating C 73

Current environmental impact (CO₂) rating B 81

Thermal transmittance is a measure of the rate of heat loss through a building fabric; the lower the value the better the energy performance.

Air permeability is a measure of the air tightness of a building; the lower the value the better the air tightness.

Low and zero carbon energy sources

The following low or zero carbon energy sources are provided for this home:

- Air source heat pump

Recommendations

The measures below are cost effective. The performance ratings after improvements listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table.

Lower cost measures (up to £500)	Typical savings per year	Performance ratings after improvements	
		Energy Efficiency	Environmental impact
1 Low energy lighting for all fixed outlets	£29	C 75	B 83
Total	£29		
Potential energy efficiency rating		C 75	
Current environmental impact (CO₂) rating		B 83	

Further measures to achieve even higher standards

The further measures listed below should be considered in addition to those already specified if aiming for the highest possible standards for this home. However you should check the conditions in any covenants, planning conditions, warranties or sale contracts.

2 Solar water heating	£57	C 79	B 85
3 Solar photovoltaic panels, 2.5kWp	£150	B 88	A 94
Enhanced energy efficiency rating		B 88	
Enhanced environmental impact (CO₂) rating		A 94	

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO₂) emissions.

About the cost effective measures to improve this home's performance ratings

Lower cost measures (typically up to £500 each)

These measures are relatively inexpensive to install and are worth tackling first. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

1 Low energy lighting

Replacement of traditional light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy light fittings when redecorating; contact the Lighting Association for your nearest stockist of Domestic Energy Efficient Lighting Scheme fittings.

About the further measures to achieve even higher standards

Further measures that could deliver even higher standards for this home. You should check the conditions in any covenants, planning conditions, warranties or sale contracts before undertaking any of these measures.

2 Solar water heating

A solar water heating panel, usually fixed to the roof, uses the sun to pre-heat the hot water supply. This will significantly reduce the demand on the heating system to provide hot water and hence save fuel and money. The Solar Trade Association has up-to-date information on local installers and any grant that may be available.

3 Solar photovoltaic (PV) panels

A solar PV system is one which converts light directly into electricity via panels placed on the roof with no waste and no emissions. This electricity is used throughout the home in the same way as the electricity purchased from an energy supplier. The British Photovoltaic Association has up-to-date information on local installers who are qualified electricians and any grant that may be available. Planning restrictions may apply in certain neighbourhoods and you should check this with the local authority. Building Regulations apply to this work, so your local authority building control department should be informed, unless the installer is appropriately qualified and registered as such with a competent persons scheme¹, and can therefore self-certify the work for Building Regulation compliance.

What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO₂ emissions. The papers you are given by the builder and the warranty provider will help you in this.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Make sure your hot water is not too hot - a cylinder thermostat need not normally be higher than 60°C Global C.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.

¹ For information on approved competent persons schemes enter 'existing competent person schemes' into an internet search engine or contact your local Energy Saving Trust advice centre on 0800 512 012.

ASSESSMENT OF ZERO CARBON HOME AND LZC TECHNOLOGY

built

			kg/m ² /year	
CO2 emissions target (AD L1A 2006)			28.61	
DER			20.7608	
Reduction	27.0%			
Code for Sustainable Homes (Ene 1)	(Level 3)			
Assessment of Zero Carbon Home				
		kg/m ² /year	kg/m ² /year	
DER			20.7608	(ZC1)
CO2 emissions from appliances and cooking			12.8284	(ZC2)
Total CO2 emissions			33.5892	(ZC3)
Additional LEL and no assumed secondary heating			-0.5132	(ZC4)
Residual CO2 emissions offset from biomass CHP			0.0000	(ZC5)
Additional allowable generation	0.0000			(ZC6)
resulting CO2 emissions offset			0.0000	(ZC7)
Net CO2 emissions			33.0760	(ZC8)

Each of the following must apply for a Zero Carbon Home:

	Criterion	Value	Pass
HLP	<= 0.80	1.2040	No
DER	<= 0.00	20.7608	No
Net CO2 emissions	<= 0.00	33.0760	No

Result: None Zero Carbon Home
